

Objectives and investment policy

Objectives

The objective of this alternative investment fund is to achieve investment growth in any type of market conditions (absolute return). The share class is accumulating.

Investment policy

The fund gains investment exposure to bonds and money market instruments from member states of the EU, member states of the OECD, China or public international bodies. The fund may gain exposure to any sector. The fund is categorised as article 8 under SFDR and promotes environmental and/or social characteristics, as well as good governance practices, through screening, exclusions, investment analysis and decision-making as well as active ownership. The fund follows Danske Invest's responsible investment policy. In actively managing the fund's portfolio, the investment manager applies flexible and dynamic investment strategies, taking long and short positions that seeks to take full advantage of market changes and opportunities within fixed income markets. The fund may use derivatives for hedging and efficient portfolio management, as well as for investment purposes. Expected leverage is 1,500% to 3,500% with an expected maximum of 4,000%. Recommendation: The fund may not be appropriate for investors who plan to redeem their money within 3 years.

Latest fund report

In May, Danske Invest Hedge Fixed Income Global Value Fund provided a return of 1.76%. Year to date, the return is 5.67%. Since inception, the portfolio has provided a return of 119.48%.

May was a volatile but overall strong month for risky assets with equities continued to recover after the dreadful March. Uncertainty stemming from the situation in Iran remains the main market driver. The prospect of a peace deal drove oil prices lower in May and fuelled equity prices. Despite the recovery in risky assets, the market is still pricing 2-4 rate hikes from the ECB this year and volatility remains elevated in fixed income markets.

We expect high issuance activity to continue in Q2 which could provide attractive opportunities amid high volatility. Issuers will try to take advantage of periods of lower volatility. Meanwhile, the need for additional funding to energy subsidies could put upside risk to this year's sovereign funding outlook.

2026 has the potential to be very interesting. Market focus remains centred on the next announcements from Trump regarding geopolitics, as well as the potential reemergence of new tariffs on selected countries and items. In addition, uncertainty regarding the interest rate path from both ECB and the Fed remains elevated. We will have a change of leadership in the Fed this year which implies even higher uncertainty. Growth has remained resilient in the US despite higher energy prices and elevated uncertainty.

At the end of May the portfolio risk level (in terms of Value-at-Risk) is 31% below our maximum risk limit, which is slightly higher compared to the end of last month. We are ready to increase or decrease the risk utilisation in the fund in the coming months depending on the opportunities that may arise.

Historical returns are no reliable indicator of future returns. It should be noted that monthly returns (in per cent) are non-additive.

Max. exit charge	0.00%
Performance fee: 20% of the share-class outperformance compared to the reference indicator, which is the High-water mark adjusted by Euro short-term rate (ESTRON). The average of the last 5 years performance fee was 1.84%.	

Risk indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products.

Return in the period: 31.05.2021 - 29.05.2026

The default for the chart is the return for the past 5 years as of end of month or, if the fund is less than 5 years old, since launch. Past performance is not a reliable indicator of future results. Future returns may be negative. The return may increase and decrease as a result of currency fluctuations if the fund is issued in a currency other than the currency used in the country in which you are domiciled.
