MONTHLY SYNTHESIS

Fund Performance	Objective	Excess Return
▲ 0.61%	▲ 0.24%	▲ 0.37%

Capital markets suffered from high volatility in April. The month started with President Trump’s “Liberation Day” announcement of import tariffs that came out broader than expected. Equity markets sold off and the VIX measure spiked to its highest level since the pandemic. Stocks later recouped much of their losses after the President softened his tone, announcing a 90-day pause in the implementation of some tariffs. Developed equities ended the month flat in line with the US stock market. Growth stocks outperformed their value counterparts, the latter taking the brunt for the collapse of the energy sector. Resilient emerging equity markets slightly advanced. The confidence crisis affected the bond markets as well. US 10-year rates soared by more than 50 bps, and reached a peak of 4.6% by mid-April, before retracing down to 4.2% at month-end.

GLOSSARY

- Ex-Ante Value-at-Risk (99%, 20D)**
Maximum potential loss that a portfolio may incur over a given time horizon, with a given probability under markets following a normal distribution. Ex: if the VaR(99%; 20d) = 10% over the next 20 days, there is a 99% chance that the portfolio will not lose more than 10% of its value.
- Volatility**
Term used to describe the extent to which the price of a fund varies within a specific timeframe. It serves as a measure of risk and is determined by calculating the standard deviation, which is the square root of the variance. The variance is obtained by averaging the differences between each value and the mean, which are then squared. Higher volatility indicates higher risk.
- PRIIPs SRI**
Guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. The risk indicator assumes you keep the product for its recommended investment horizon. The actual risk can vary significantly if you exit before maturity and you may get back less.
- Modified Duration**
Risk attached to a given change in the interest rate. For example, for a modified duration of +1 and a 1% increase of the interest rate, the portfolio's value would drop by 1%. Inversely, for a modified duration of -1% and a 1% rate increase, the portfolio's value would increase by 1%.
- Proceed-Weighted Yield**
1 year performance in unchanged market conditions.
- Sharpe Ratio**
Excess return divided by the standard deviation of this return. It thus shows the marginal return per unit of risk.
- Maximum Drawdown**
Maximum loss since inception
- Sortino Ratio**
Excess return divided by the negative standard deviation of this return.

MAIN RISKS OF THE FUND

The Fund is exposed to specific risks, including: the risk of capital loss, discretionary management, credit, interest rate, counterparty, volatility, exchange rates as well as arbitrage, overexposure and investment in emerging markets.

The capital invested is not guaranteed. For a more complete description of risks, please refer to the prospectus or to any other legal documentation of the Fund which is available on our website: www.h2o-am.com
