Commentary

In fund management, we remain focused on companies with strong brands and strategies targeting the fast-growing neighboring Asian markets. We are also investing on domestic themes like Tourism and Health, as well as long-term themes centered around the Asian middle class and robotics. In 2024, land prices in Japan recorded their sharpest increase in 34 years, rising by an average of 2.7% as of January 1st, according to a survey by the Ministry of Land, Infrastructure, Transport and Tourism. This growth, the fastest since 1991, marks the fourth consecutive year of gains, reflecting a moderate economic recovery. The property market's rebound has expanded to regional areas, supported by a surge in tourism and steady demand for residential and commercial properties. Residential land prices rose by 2.1%, driven by consistent housing demand, particularly in areas with good transportation access and popular tourist destinations. Foreign investor interest in vacation homes and condominiums also contributed to this upward trend. On the commercial side, land prices increased by 3.9%, notably in major tourist cities such as Kyoto and Osaka, which benefited from a record number of foreign visitors in 2024. Urban redevelopment projects further boosted demand in commercial zones. Industrial land saw the highest growth, climbing 4.8% for the ninth consecutive year. This was fueled by the expansion of large-scale logistics facilities for the booming e-commerce market. Cities like Chitose in Hokkaido and Kikuyo in Kumamoto, home to semiconductor plants, experienced significant land price increases due to rising demand for housing and office space. Japan's three major metropolitan areas—Tokyo, Osaka, and Nagoya—posted a 4.3% increase in land prices. Meanwhile, the four key regional cities—Sapporo, Sendai, Hiroshima, and Fukuoka—recorded a 5.8% gain, although growth slowed compared to 2023 due to higher construction costs. Despite this positive trend, concerns remain about the impact of rising interest rates (raised to 0.5% in January 2024) and increasing construction expenses on the market's future outlook.

■ Definitions

Tracking error is a measure of a fund's relative risk relative to its benchmark. It is given by the annualized standard deviation of a fund's relative performance relative to its benchmark. The lower it is, the more the fund has a risk profile close to its benchmark.

The **Sharpe Ratio** measures how much a portfolio returns relative to the rate of return on a risk-free investment (risk premium) divided by a standard deviation of the portfolio's return (volatility). A high Sharpe ratio is a good indicator.

The **maximum drawdown** is the return on the worst possible investment period. It indicates the maximum loss that an investor could have suffered had he bought the fund at the peak of the observation period and sold it at a low during this period.
