PERFORMANCE BENCHMARK

The Fund will measure its performance against the Markit iBoxx Euro Corporates TR Index (the "Benchmark"). The Fund is actively managed, which means the Investment Manager has discretion to invest outside the Benchmark subject to the investment objective and policies disclosed in the Prospectus. However, as the Benchmark covers a significant proportion of the investable universe, the majority of the Sub-Fund's holdings will be constituents of the Benchmark and the weightings in the portfolio may be similar to those of the Benchmark. The investment strategy will restrict the extent to which the portfolio holdings may deviate from the Benchmark and consequently the extent to which the Sub-Fund can outperform the Benchmark.

FUND RATINGS

KEY RISKS ASSOCIATED WITH THIS FUND

- There is no guarantee that the Fund will achieve its objectives.
- Where the Fund invests significantly in a single market, this may have a material impact on the value of the Fund.
- Derivatives are highly sensitive to changes in the value of the asset from which their value is derived. A small movement in the value of the underlying asset can cause a large movement in the value of the derivative. This can increase the sizes of losses and gains, causing the value of your investment to fluctuate. When using derivatives, the Fund can lose significantly more than the amount it has invested in derivatives.
- Investments in bonds/money market securities are affected by interest rates and inflation trends which may negatively affect the value of the Fund.
- Bonds with a low credit rating or unrated bonds have a greater risk of default. These investments may negatively affect the value of the Fund.
- The issuer of a security held by the Fund may not pay income or repay capital to the Fund when due.
- Emerging Markets have additional risks due to less-developed market practices.
- Contingent Convertible Securities (CoCo's) convert from debt to equity when the issuer's capital drops below a pre-defined level. This may result in the security converting into equities at a discounted share price, the value of the security being written down, temporarily or permanently, and/or coupon payments ceasing or being deferred.
- The insolvency of any institutions providing services such as custody of assets or acting as a counterparty to derivatives or other contractual arrangements, may expose the Fund to financial loss.
- If this share class is denominated in a different currency from the base currency of the Fund. Changes in the exchange rate between the share class currency and the base currency may affect the value of your investment.
- For hedged share classes the hedging strategy is used to reduce the impact of exchange rate movements between the share class currency and the base currency. It may not completely achieve this due to factors such as interest rate differentials.
- A complete description of risk factors is set out in the Prospectus in the section entitled "Risk Factors".

RISK AND REWARD PROFILE - EURO A (ACC.)

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 2 out of 7, which is a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact the capacity of BNY Mellon Fund Management (Luxembourg) S.A. to pay you.

Please refer to the prospectus and the KIID before making any investment decisions. Documents are available in English and an official language of the jurisdictions in which the Fund is registered for public sale. Go to www.bnymellonim.com.
