Performance data quoted reflect past performance and are no guarantee of future results. Current performance may be higher or lower than the performance quoted. The net asset value performance above shows the Fund's average annual total returns excluding sales charges. If sales charges had been included, performance would have been lower. The maximum sales charge for Class A shares is up to 5.00%. Sales charges are not applicable to Class Z shares. Returns for other share classes will differ from those shown above. The investment return and principal value of an investment in the Fund will fluctuate so that shares, on any given day or when redeemed, may be worth more or less than their original cost. Returns for periods of less than one year are not annualized. Please refer to the Share Class Information table on the next page for since inception dates; benchmark since inception is 18/02/2014. Currency-hedged share classes use hedging techniques in an attempt to reduce fluctuations between the hedged share class and the portfolio's base currency. The goal is to deliver returns that track the portfolio's base currency returns more closely. Any gains/losses associated with the hedging techniques will accrue solely to the relevant hedged share class. There can be no guarantee that these techniques will be successful.

GROWTH OF USD 10,000

Past performance does not predict future returns.

Based on a hypothetical Class A (acc) USD investment of USD 10,000 on 18/02/2014 without sales charge and includes the reinvestment of all distributions, if any. Data as of 31/12/2024.

Key Risks: The Fund is subject to risks associated with investing in debt securities, including credit risk, interest rate risk, high yield risk, mortgage and asset backed securities risk and derivatives risk. For share classes denominated in a currency other than U.S. dollars, changes in currency exchange rates may reduce or increase fund returns. Please refer to the end of this document as well as the Fund's KIID and prospectus for more detailed risk information.

Additional share classes are available upon request. Please see the Fund's prospectus for additional information. The fund's monthly dividend yield percentage is calculated for each share class by annualizing the most recent dividend per share amount and dividing the result by the share class' net asset value. Dividends and the dividend yield are subject to the management fee waiver. **Past performance is not a reliable indicator or guarantee of future results.**

CREDIT QUALITY DISTRIBUTION

Ratings (other than U.S. Treasury securities or securities issued or backed by U.S. agencies) provided by Standard & Poor's, Moody's, and Fitch. For certain securities that are not rated by any of these three agencies, credit ratings from other agencies may be used. Where the rating agencies rate a security differently, Lord Abbett uses the average rating based on numeric values assigned to each rating. Totals may not add to 100% due to rounding.

GLOSSARY OF TERMS

Effective Duration is the change in the value of a fixed-income security that will result from a 1% change in market interest rates, taking into account anticipated cash flow fluctuations from mortgage prepayments, puts, adjustable coupons, and potential call dates. Duration is expressed as a number of years, and generally, the longer a duration, the greater the interest-rate risk or reward for a portfolio's underlying bond prices. Where applicable, securities, such as common or preferred stock, convertible bonds and convertible preferred stock, ETFs, ADRs, and CPI swaps and related futures are excluded from these calculations.

Average Coupon is the weighted average coupon for all the securities in a portfolio. A bond's coupon is the annual rate of interest on a bond's face value that the issuer agrees to pay the holder.

Average Maturity is the length of time until the average security in a portfolio will mature or be redeemed by its issuer in proportion to its dollar value. Indicating a portfolio's sensitivity to general market interest rate changes, a longer average maturity implies greater relative portfolio volatility.

Average Yield to Worst is the lowest yield that can be received on a bond without defaulting.

Average Yield to Maturity is the rate of return anticipated on a bond if held until it matures. Yield to maturity assumes all the coupon payments are reinvested at an interest rate that equals the yield-to-maturity. The yield to maturity is the long-term yield expressed as an annual rate.

Investors should carefully consider the investment objectives, risks, charges, and expenses of the Fund. This and other important information is contained in the Fund's prospectus, fund supplements, KIIDs, and Summary of Shareholder Rights. Read these documents carefully before you invest. To obtain a prospectus, fund supplement, and KIID for any Lord Abbett fund, contact your investment professional, Lord Abbett Distributor LLC at (888) 522-2388, or visit us at www.lordabbett.com. Where required under national rules, the key investor information document (KIID), Summary of Shareholder Rights, fund supplement and prospectus will also be available in the local language of the relevant EEA Member State. Subscribing for shares in the Fund shall not provide an investor a direct interest in any assets of the Fund.

Morningstar Rating Information (If Applicable): For each fund with at least a three-year history, Morningstar calculates a Morningstar Rating based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a fund's monthly performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of funds in each category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three, five, and ten year (if applicable). Overall Morningstar Rating is a copyright of Morningstar, Inc., 2025. All Rights Reserved. The ICE BofA U.S. High Yield Constrained Index is a capitalization-weighted index of all US dollar denominated below investment grade corporate debt publicly issued in the US domestic market. Qualifying securities must have a below investment grade rating (based on an average of Moody's, S&P and Fitch), at least 18 months to final maturity at the time of issuance, at least one year remaining term to final maturity as of the rebalancing date, a fixed coupon schedule and a minimum amount outstanding of \$100 million. The index caps individual issuer at 2%. Index constituents are capitalization weighted, based on their current amount outstanding, provided the total allocation to an individual issuer does not exceed 2%. Issuers that exceed the limit are reduced to 2% and the face value of each of their bonds is adjusted on a pro-rata basis. The face values of bonds of all other issuers that fall below the 2% cap are increased on a pro-rata basis. In the event there are fewer than 50 issuers in the Index, each is equally weighted and the face values of their respective bonds are increased or decreased on a pro-rata basis.
