MONTHLY SYNTHESIS

Fund Performance	Objective	Excess Return
▼ -0.64%	▼ -0.42%	▼ -0.23%

In March, uncertainty concerning US growth and inflation soared following the announcement by the Trump Administration of new tariffs on steel, aluminium and autos imports from Mexico, Canada and China. In this environment, the Federal Reserve decided to keep its benchmark rates unchanged while leaving the door open to future cuts so as to counter the downside risk to growth. Conversely, expectations of a much larger bond issuance to finance new government spending programmes in defence & infrastructure weighed on European sovereign bond returns. The ECB cut its leading rate a second time over the quarter.

GLOSSARY

Ex-Ante Value-at-Risk (99%, 20D)

Maximum potential loss that a portfolio may incur over a given time horizon, with a given probability under markets following a normal distribution. Ex: if the VaR(99%; 20d) = 10% over the next 20 days, there is a 99% chance that the portfolio will not lose more than 10% of its value.

Volatility

Term used to describe the extent to which the price of a fund varies within a specific timeframe. It serves as a measure of risk and is determined by calculating the standard deviation, which is the square root of the variance. The variance is obtained by averaging the differences between each value and the mean, which are then squared. Higher volatility indicates higher risk.

PRIIPs SRI

Guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. The risk indicator assumes you keep the product for its recommended investment horizon. The actual risk can vary significantly if you exit before maturity and you may get back less.

Modified Duration

Risk attached to a given change in the interest rate. For example, for a modified duration of +1 and a 1% increase of the interest rate, the portfolio's value would drop by 1%. Inversely, for a modified duration of -1% and a 1% rate increase, the portfolio's value would increase by 1%.

Proceed-Weighted Yield

1 year performance in unchanged market conditions.

Sharpe Ratio

Excess return divided by the standard deviation of this return. It thus shows the marginal return per unit of risk.

Maximum Drawdown

Maximum loss since inception

Sortino Ratio

Excess return divided by the negative standard deviation of this return.

MAIN RISKS OF THE FUND

The Fund is exposed to specific risks, including: the risk of capital loss, discretionary management, credit, interest rate, counterparty, volatility, exchange rates as well as arbitrage, overexposure and investment in emerging markets. The capital invested is not guaranteed. For a more complete description of risks, please refer to the prospectus or to any other legal documentation of the Fund which is available on our website: www.h2o-am.com
