Management commentary

Monetary policy:

The European Central Bank kept its refi rate at 0.00%; deposit facility and marginal rates were maintained respectively at -0.40% and 0.25%.

The accommodating aspect of the monetary policy was maintained. In January 2018 net asset purchases are to be made at the rate of 30 billion euros per month until the end of September 2018 or beyond, if necessary: "Until the ECB observes a long-term adjustment to inflation evolution in accordance with its goal".

Management policy:**- Liquidity:**

Instant liquidity was essentially assured by day-to-day operations.

- Rate risk:

The portfolio's weighted average maturity (WAM) stood at 62 days at the end of the period.

- Credit risk:

Short-term spreads contracted slightly on the short part of the curve, with 3-month to 1-year maturities ending up at the respective levels of EONIA -10bps to EONIA + 4 bps.

During the month, we essentially tried to invest in any opportunity in a market with very few issues. Country allocations, notably, showed a predominance of puttable securities based on final maturities rather than the redemption-at-par option attached to investment products of this type.

The end-of-month bond weighting came out at about 10% of assets under management, with nearly 3% of assorted puttable bonds, most of them 3-month puts. BBB-rated issuers accounted for about 38% of the portfolio at the end of the month.

- Weighted average life and mean rating:

The weighted average life (WAL) of this portfolio in the "monetary" category is 163 days.

Its mean long-term rating remains at a good level of A-.
