

ELEVA Euroland Selection - Class H2

30/01/2026
Monthly report

Investment objective and approach

- Aiming to achieve superior long-term risk adjusted returns
- Investing primarily in European equities and equity related securities
- Conviction investing using bottom-up stock-picking with high active weight of 80%+ and tracking error target of 6%
- Flexible, opportunistic, and pragmatic approach, with no sector/country bias and style/market cap agnostic
- Using a macroeconomic overlay to support sector positioning

This document should be read in conjunction with the prospectus and relevant KIDs which are available on our website www.elevacapital.com.

Past performance does not predict future returns. The UCITS Fund does not benefit from any guarantee or protection, so this product presents a risk of capital loss.

Additional risks: Market liquidity Risk, Counterparty Risk, Economic Dislocation Risk, ESG Risk.

Performance (net of fees)

Sources: ELEVA Capital

As the share class was launched less than a year ago, there is too little data to provide any useful indication of past performance.

Monthly Comment

European markets ended January higher, despite elevated volatility driven by geopolitical developments and sharp sector rotations. Markets were initially supported by strong global risk appetite, before sentiment turned more volatile amid renewed geopolitical tensions involving Iran, Ukraine and Greenland, as well as uncertainties surrounding US trade policy. Commodity markets were particularly active, with precious metals reaching record highs and volatile energy prices influencing sector performance. Against this backdrop, cyclical and value stocks outperformed.

Sector allocation had a slightly negative impact, affected by the underweight in energy and in technology as well as the overweight in financials, but somewhat compensated by the positive impact of the underweight in consumer discretionary, communication services and consumer staples. Stock picking was positive, particularly in industrials, financials and information technology.

Lotus Bakeries had a strong move, backed by increasing demand for their Biscoff products, that should be met by increased production after a period of capacity constraint. **Siemens Energy** performed strongly, with an increase in demand and pricing given strong electrification trends and the need to invest in gas turbines and grid infrastructure. Key competitor GE Vernova upgraded their guidance. Other electrification winners like **Prysmian**, or more broadly, utilities like **SSE**, also were in demand. **ASML** had a very strong start to the year and produced a record high backlog in Q4. Finally, commodity prices were strong, helping **Arcelor Mittal**.

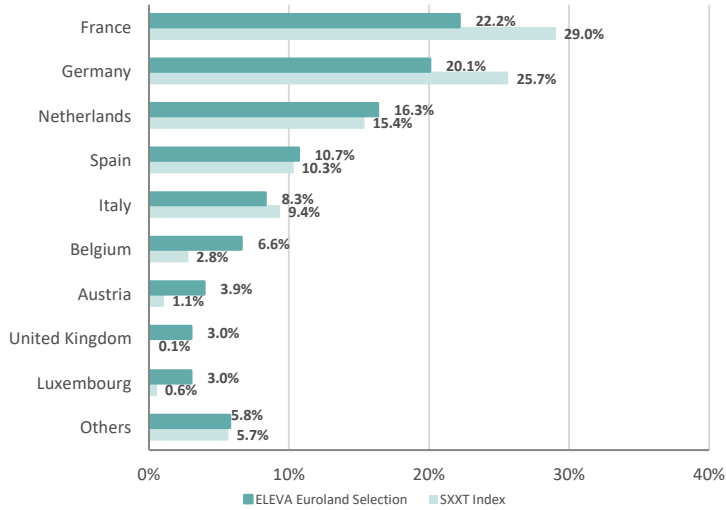

Luxury names were under pressure, **Richemont's** good results were partly mitigated by concerns on margin development with FX and gold prices. **LVMH** also failed to excite investors with top line just meeting expectations in Q4. Finally, **Danone** was hit by a partial product recall on infant formula.

Our proprietary European macroeconomic index (ELEVA Capital Index Europe) remains buoyant, while the global one (ELEVA Capital Index Global) is being penalized by the contraction in liquidity and activity caused by the US shutdown. There are signs of economic improvement in China. Patience is needed in Europe for interest rates and stimuli announcements to have an impact on economic activity. In that environment, we believe that corporates will still be able to grow at moderate pace, despite trade wars and US dollar weakness. Value and cyclicals were at 53.3% and 70.8% of the fund respectively.
